About SecPod

SecPod is a global, prevention-first cybersecurity company helping enterprises reduce cyber risk through proactive vulnerability and exposure management, automated remediation, endpoint security, and AI-driven cloud security. Through the Saner Platform, SecPod enables organizations to strengthen security posture across endpoints, networks, servers, and cloud environments.

At SecPod, the culture is flat, innovation-driven, and execution-focused, where curiosity is encouraged, ownership is valued, and ideas matter more than hierarchy.

Job Title: Product Support Engineer

Experience: 0 to 2 years

Role Summary

Join our Product Support Team at SecPod and be a vital connection between our products and customers. Face real-world technical challenges by offering excellent support for advanced patch management, vulnerability management, and compliance auditing software. Your expertise will shine in understanding diverse customer environments and solving complex issues. From helping prevent cyberattacks to assisting with log analysis and vulnerability checks, you'll be instrumental in reducing cyber risks and closing the gap in Cyber Exposure. Be part of our team delivering exceptional support that truly matters!

Your Opportunity

- Collaborate closely with various teams at SecPod, such as Development, Security Intelligence, Operations, and Sales, fostering strong relationships.
- Provide technical support to NASA and EMEA customers through a rotational shift model.
- Thoroughly analyze and respond to customer technical inquiries to ensure prompt and effective resolution.
- Assess vulnerability scan results, system audits, and log events to identify and address potential security issues.
- Replicate customer software issues in a controlled lab environment to facilitate troubleshooting and resolution.
- Facilitate the flow of customer feedback to relevant departments, including Product Management and Research & Development, to drive product improvement.
- Create and publish KB Articles for re-use by customers and support Team.

What You'll Need

- 0 - 2 years of experience in customer support, technical support, system administration, or related customer-facing roles, particularly for large enterprise clients.
- Comprehensive understanding of cross-platform operating systems including Linux, Mac OS, and Windows.
- Proficiency in any ticketing systems such as JIRA, Zendesk, or Salesforce.
- Genuine passion for learning, resolving customer issues and ensuring success in a fast-paced, highly technical environment.
- Excellent relationship management, customer service, and communication skills across various channels.
- Familiarity with Java-based applications and application-level troubleshooting techniques.
- Solid understanding of REST APIs, using Postman for testing, debugging HTTP responses, and handling authentication errors.
- Familiarity with cloud platforms (AWS, Azure, GCP) and tools like Docker, Terraform, and Kubernetes (basic concepts).
- Solid understanding of networking, Linux/Windows administration, and virtualization technologies including VMWare, Hyper-V, AWS, Azure, etc.

Bonus if you have

- Familiarity and experience with patch management, vulnerability management, or cybersecurity tools, whether in a professional or academic context.
- Exposure to industry security standards such as NIST, HIPAA, CIS, ISO 27001, etc.

Soft Skills

- Excellent written and verbal communication skills.
- Strong customer-facing and stakeholder management skills.
- Ability to manage multiple customer engagements simultaneously.
- Strong documentation, presentation, and training skills.
- Team player with the ability to collaborate across Product, Engineering, Sales, Customer Success, and Support teams.

Educational Qualification

- B.E./B.Tech (Computer Science, Information Technology, Electronics, or related field)
- MCA / MSc (Computer Science or Information Technology)
- Equivalent technical degree with relevant skills and experience

Classification: INTERNAL
